Operational Medicine (BLUE)

Presented by

LCDR Allegra T. Halyard, MSC, USN

Commander, Atlantic Fleet Surgeon

POMI

Agenda

- CURRENT STATUS
- FLEET HSS
- SEA POWER 21
- NEW MODELS FOR THE FLEET

Current Status

- **MANPOWER**
  - 100% medical manning onboard all platforms
- **LOGISTICS**
  - LHD/LHA's have been outfitted with Orthopedic AMMALs
  - CVN's/CV's and LHA/D's have computer tele-radiology installed
  - Transitioning from Fleet Prime Vendor (FPV) to Regional Prime Vendor(RPV)

Current Status

- INFORMATION TECHNOLOGY
  - TMIP-M currently OT+E on 5 PACFLT Ships
  - 2 LANTFLT Ships scheduled for FY04
- TRICARE
  - TRICARE Global Remote Overseas (TGRO) Contract

Logistics: Equipment
C3: Command, Communications, Computers

Sea Power 21

- Sea Power 21 prescribes a strategy- to-concepts- to -capabilities continuum that will result in greatly enhanced power, protection, and operational freedom. It provides the frame work for how we will organize, align, integrate, and transform our Navy to meet the challenges that lie ahead.

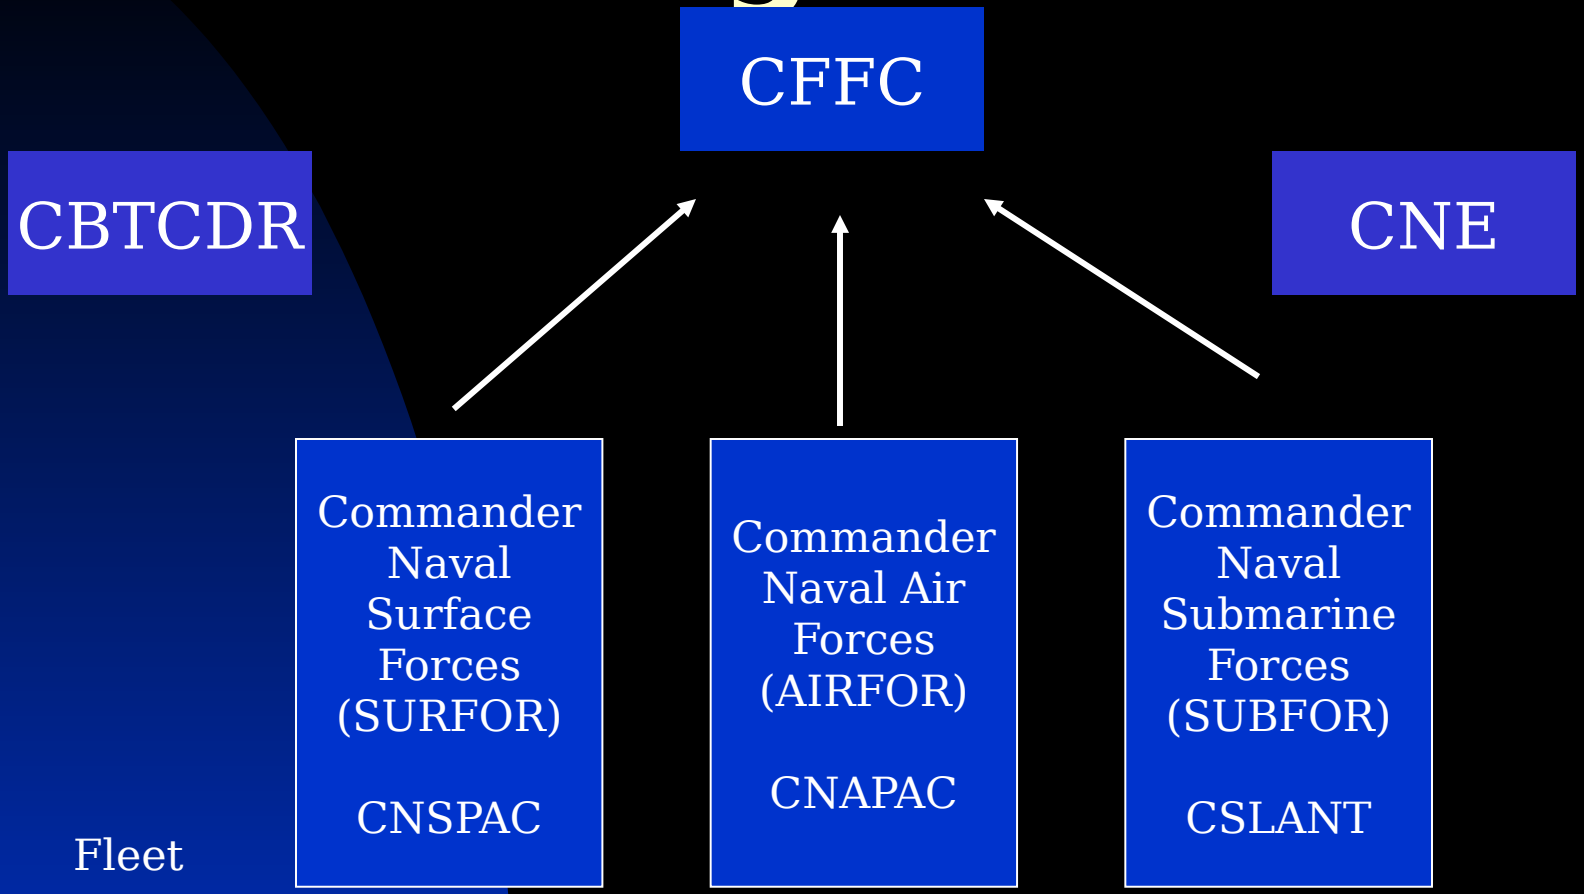
Sea Power 21

- Sea Strike.
  - Projecting precise and persistent offensive power.
- Sea Shield.
  - Projecting Global Power
- Sea Trial.
  - Accelerating enhanced capabilities to the fleet through innovation and experimentation.
- Sea Basing.
  - Projecting joint operational independence.
- FORCEnet.
  - Integrating the power of warriors, sensors, weapons, networks, and platforms.

New Models for the Fleet

- Commander, Fleet Forces Command (CFFC)
  - The Fleet will be the center of Naval employment, creating a single voice for fleet requirements, streamlining organizations, and eliminating redundancies.
  - CFFC alignment will expand the Fleet's authority to determine requirements, influence resourcing decisions, and direct experimentation.
    - **CFFC: Supporting Navy-wide alignment**
      - **Optimize manning, training, and equipping the Fleet**
      - **Common Fleet voice for war fighting requirements**
      - **Eliminate message mismatch and establish unified policies**
      - **Mirror other "Forces" arrangements within JFCOM**

Organizational Alignment



Fleet TYCOMs

New Models for the Fleet

- Force Response Plan (FRP)
  - Effective 1 October 2003 The US Navy will make its force more responsive to unpredictable requirements. Overall the FRP will balance the needs of the Combatant Commanders with available resources and create a “global surge force” pool of readily available units.

Three Phases of the FRP:

- Maintenance Phase.
  - The Carrier Strike Group, or CSG, spends six months after deployment undergoing maintenance.
- Training Phases.
  - Basic: First three months after yard period, the CSG conducts its basic phase of training, and becomes “Emergency Surge Capable or employable”.
  - Intermediate: the next three months of training the CSG completes Composite Training Unit Exercise, and the air wing becomes blue-water certified. At this point the CSG is considered Surge ready.
- Sustained Readiness Phase.
  - The final six to nine months before deployment, the CSG completes it Joint Task Force Exercise and conducts refresher training as needed. At the end of this phase one year after leaving the yards, the CSG is deemed “Routine deployable”.
